Jay Thakkar

Senior Fullstack Engineer @ iBaset Pvt. Ltd.

| Architect | Solution Architect | Node.js | React | React-Redux | Devops | Aws | Css | Scss | Tailwind | Python | Fastapi | SQL | MongoDb | Linux | Javascript | Html | Frontend | Backend | Fullstack Engineer |

Professional Summary

I'm a Senior Full Stack Developer with 12+ years of experience building and maintaining enterprise software. Throughout my career, I've had the opportunity to grow across multiple engineering disciplines—from frontend development to backend microservices, platform engineering, DevOps, security, and customer-facing technical consulting.

I began by developing enterprise applications with React.js, building reusable components for a shared component library and delivering scalable, maintainable user interfaces using React, Redux, Redux Saga, React Context, Hooks, and REST APIs.

As my responsibilities grew, I transitioned into backend engineering, where I now design, develop, and maintain Node.js-based microservices, including the Notification Server, JSReport Server, and Configurator Tool. I've contributed to architectural decisions, implemented Swagger/OpenAPI documentation, and developed migration scripts to successfully move services from MongoDB to SQL.

Beyond application development, I enjoy solving platform-level challenges. I've worked closely with cybersecurity teams to remediate VAPT and Snyk vulnerabilities, deployed applications on on-premises Linux environments using Docker and Kubernetes, and supported production systems throughout their lifecycle.

One of the most rewarding parts of my journey has been working directly with enterprise customers. I help clients configure complex JSON-based solutions, troubleshoot production issues, and mentor new engineers through knowledge transfer sessions. I enjoy bridging the gap between technical implementation and business needs.

I believe in writing clean, maintainable code, understanding systems end-to-end, and continuously learning new technologies to build better software.

Core Technologies: React.js, Node.js, JavaScript, TypeScript, Redux, Express.js, SQL, MongoDB, Docker, Kubernetes, Linux, Shell Scripting, REST APIs, Swagger/OpenAPI, Microservices, Monorepo, Git.

I'm always interested in connecting with fellow engineers, sharing knowledge, and exploring opportunities to build scalable enterprise applications.

Experience

Senior Fullstack Engineer

May-2021 - Present

iBaset Pvt. Ltd.

1. Solumina i-Series (Enterprise Manufacturing Application)

- Developed and enhanced enterprise-grade frontend features using React.js.

- Gujarat Technological University
- Grade: 60%

- **Bachelors of Computer Application**
  - 2011
  - R.J Tibrewal of Computer Application
  - Gujarat University
  - Grade: 61%

- **12th Boards (Commerce)**
  - 2008
  - Shree Sahajanand Higher Secondary School
  - Gujarat Board
  - Grade: 61%

- **10th boards**
  - 2006
  - Shree Sahajanand Secondary School
  - Gujarat Board
  - Grade: 60%

- Built and maintained reusable components for the organization's shared component library, improving UI consistency and accelerating feature development.
- Integrated REST APIs and implemented scalable state management using Redux, Redux Saga, React Context, and Hooks.
- Worked within a monorepo architecture, collaborating with cross-functional teams to deliver scalable and maintainable solutions.
- Contributed to improving application performance, code quality, and component reusability.

2. Notification Server & JSReport Server (Node.js Microservices)

- Designed, developed, and maintained business-critical Node.js microservices supporting enterprise workflows.
- Contributed to the architectural design and implementation of scalable backend services.
- Developed migration scripts to migrate data from MongoDB to SQL while ensuring data integrity and minimal downtime.
- Implemented Swagger/OpenAPI documentation to improve API usability and simplify integrations.
- Collaborated with the Cyber Security team to remediate VAPT and Snyk vulnerabilities, enhancing platform security.
- Deployed and maintained services on on-premises Linux infrastructure using Docker, Kubernetes, and Shell scripting.
- Supported production deployments, troubleshooting, and continuous platform improvements.

3. Configurator Tool (JSON-Based Dashboard Platform)

- Played a key role in designing and developing a JSON-driven dashboard configuration platform.
- Contributed to the architectural design of the platform to support scalable and configurable enterprise solutions.
- Developed reusable UI components to accelerate feature delivery and improve maintainability.
- Collaborated with product and engineering teams to deliver reliable, extensible, and user-centric solutions.

4. Customer Success & Technical Leadership

- Serve as the technical owner for the Notification Server, JSReport Server, and Configurator Tool.
- Work directly with enterprise customers to implement complex JSON-based configurations and resolve production issues.
- Conduct Knowledge Transfer (KT) sessions and mentor new engineers, enabling faster onboarding and effective knowledge sharing.
- Collaborate with cross-functional teams to deliver reliable enterprise solutions and continuously improve customer experience.
- Drive continuous improvements by identifying opportunities to enhance system performance, maintainability, and operational efficiency.

1. J2 Global (Enterprise Web Platform)

- Served as the Lead Full Stack Developer, driving end-to-end feature development across frontend and backend.
- Designed and developed scalable web applications using **Node.js, React.js, and Redux**.
- Collaborated with cross-functional teams to deliver high-quality features aligned with business requirements.
- Integrated REST APIs and implemented reusable, maintainable application components.
- Mentored team members and participated in code reviews to maintain coding standards and application quality.

2. Catalyst Console (Enterprise Administration Platform)

- Led frontend development for a React-based enterprise console, delivering scalable and user-friendly interfaces.
- Developed reusable React components and implemented efficient state management using Redux.
- Wrote comprehensive unit tests using **Jest** and **Enzyme**, improving application reliability and reducing regression issues.
- Built and maintained UI components using **Storybook**, promoting component reusability and design consistency.
- Worked closely with backend developers, QA teams, and stakeholders to deliver high-quality releases.

3. Genes2Teens.com (Healthcare & Wellness Platform)

- Served as the Lead Full Stack Developer, delivering new features across both frontend and backend.
- Developed responsive user interfaces using **React.js** and implemented backend services with **Node.js**.
- Designed and integrated REST APIs to enable seamless communication between frontend and backend systems.
- Optimized application performance and enhanced user experience through clean, maintainable code.
- Collaborated with stakeholders to translate business requirements into scalable technical solutions.

Core Technologies: Node.js, React.js, Redux, JavaScript, REST APIs, Jest, Enzyme, Storybook, HTML5, CSS3, Git.

UI Developer

jun-2018 - jul-2019

Plumslice Labs Pvt. Ltd. (Digitalwave Pvt. Ltd)

FirstHandle (Marketing Automation Platform)

- Served as a UI Developer, contributing to the development of a marketing automation platform from the ground up.
- Architected and developed the frontend using React and Redux, establishing a scalable foundation for future product enhancements.
- Designed and implemented reusable React components and efficient state management, improving application maintainability and performance.
- Built responsive, interactive user interfaces with a strong focus on usability, scalability, and clean application architecture.

- Collaborated with backend developers, product managers, and QA teams to deliver high-quality features throughout the software development lifecycle.

WeeGreen Campaign (Marketing Campaign Management Platform)

- Developed responsive campaign management interfaces using Angular 4, delivering scalable and user-friendly web applications.
- Designed and implemented a multi-tenant theming engine using Stylus, Pug, and Jade, enabling configurable client-specific branding and customization.
- Built reusable UI components and optimized application performance to ensure a consistent user experience across deployments.
- Worked closely with cross-functional teams to deliver new features, enhancements, and production releases in an Agile environment.

WeeGreen Marketplace (E-commerce Platform)

- Developed key marketplace features including catalog upload, catalog download, catalog listing with pagination, and real-time notifications.
- Built responsive user interfaces using JavaScript, jQuery, HTML5, and CSS3, focusing on performance and usability.
- Implemented reusable frontend components and contributed to improving application architecture and maintainability.
- Collaborated with backend engineers and QA teams to deliver scalable e-commerce capabilities and production-ready releases.

WeeGreen Web (Corporate Web Platform)

- Contributed to the development and maintenance of the company's web platform, delivering responsive and interactive user interfaces.
- Implemented frontend features using JavaScript, jQuery, Handlebars, HTML5, and CSS3 while ensuring cross-browser compatibility and performance.
- Participated in frontend modernization and refactoring initiatives by introducing reusable components and JavaScript best practices.
- Worked with cross-functional teams to deliver new features, bug fixes, and continuous product improvements.

Core Technologies: React, Redux, Angular 4, JavaScript, jQuery, HTML5, CSS3, SCSS, Stylus, Pug, Jade, Handlebars, Node.js, Git.

Frontend Developer

Jul-2014 - Jun-2018

Asite Solutions India Pvt. Ltd.

Adoddle (Enterprise Construction Collaboration Platform)

- Served as a Frontend Developer, contributing to the development of an enterprise SaaS platform for construction project collaboration and document management.
- Developed and maintained core product modules including Projects, Files, Bulk File Upload, Chunked File Upload, Custom File Attributes, and Project Folder Structure Copy.
- Owned the File Upload with Custom Attributes module, delivering an end-to-end solution that enabled configurable document metadata and improved document organization and searchability.
- Engineered a reliable chunked file upload mechanism to support large file transfers, enhancing upload stability and overall user experience.
- Led frontend code refactoring initiatives by introducing reusable components, JavaScript best practices, and design patterns that improved code quality and

maintainability.

- Collaborated with product managers, backend developers, and QA engineers to deliver scalable features, production enhancements, and bug fixes in an Agile environment.

Workflow Management (Business Process Automation)

- Developed workflow management capabilities that enabled business process automation and real-time collaboration within the Adoddle platform.
- Built interactive workflow interfaces using AngularJS and SASS, focusing on usability, scalability, and maintainability.
- Implemented WebSocket-based real-time communication to synchronize workflow updates instantly across connected users.
- Developed reusable UI components and optimized application performance while ensuring cross-browser compatibility for enterprise users.
- Worked closely with cross-functional teams to deliver reliable workflow features that improved operational efficiency and user collaboration.

Core Technologies: JavaScript, jQuery, AngularJS, HTML5, CSS3, SASS, AJAX, WebSockets, Git.

Projects

Solumina i-Series

Contributed to the development of **Solumina i-Series**, an enterprise Manufacturing Execution System (MES) used by global manufacturers to streamline production processes, improve operational efficiency, and ensure manufacturing quality. Played a key role in building scalable frontend modules and reusable components that formed the foundation of the product's user interface.

Key Contributions

- Developed enterprise-grade frontend features using **React.js**, delivering intuitive and scalable user experiences.
- Built reusable components for the organization's shared component library, improving UI consistency and accelerating feature development across multiple applications.
- Integrated REST APIs and implemented scalable state management using **Redux**, **Redux Saga**, **React Context**, and **Hooks**.
- Worked within a monorepo architecture, contributing to maintainable and modular application development.
- Collaborated closely with product owners, UX designers, and backend engineers to deliver high-quality enterprise solutions.
- Participated in code reviews, debugging, performance optimization, and continuous application improvements.

Key Highlights

- ✅ Enterprise Manufacturing Application
- ✅ Shared Component Library
- ✅ React.js Ecosystem
- ✅ REST API Integration
- ✅ Monorepo Development

- ✅ Performance Optimization
- ✅ Cross-functional Collaboration

Notification Server

Contributed to the design, development, and maintenance of the Notification Server, a business-critical microservice responsible for delivering notifications across enterprise applications. Played a significant role in backend development, architecture discussions, database migration, security improvements, and production deployments.

Key Contributions

- Designed and developed scalable Node.js microservices supporting enterprise notification workflows.
- Contributed to architectural decisions focused on scalability, maintainability, and long-term platform evolution.
- Developed migration utilities to successfully migrate application data from **MongoDB** to **SQL**, ensuring data integrity and minimal downtime.
- Implemented **Swagger/OpenAPI** documentation, improving API discoverability and developer productivity.
- Worked closely with the Cyber Security team to remediate **VAPT** and **Snyk** vulnerabilities, improving application security.
- Deployed and maintained services on on-premises Linux infrastructure using **Docker**, **Kubernetes**, and **Shell scripting**.
- Investigated production issues, optimized application performance, and supported enterprise deployments.

Key Highlights

- ✅ Enterprise Microservices
- ✅ MongoDB to SQL Migration
- ✅ Swagger/OpenAPI
- ✅ Security Remediation
- ✅ Production Support

JSReport Server

Worked on the JSReport Server, an enterprise reporting service responsible for generating dynamic business reports and documents. Contributed to backend development, platform architecture, database migration, security compliance, deployment automation, and long-term platform maintenance.

Key Contributions

- Developed and enhanced Node.js-based reporting services supporting enterprise document generation.
- Contributed to architectural improvements focused on scalability, maintainability, and service reliability.
- Designed and implemented MongoDB-to-SQL migration utilities for seamless platform modernization.
- Implemented comprehensive Swagger/OpenAPI documentation for internal and external service consumers.
- Collaborated with Cyber Security teams to resolve VAPT and Snyk vulnerabilities and improve platform security.

- Supported deployments on Linux-based on-premises infrastructure using Docker, Kubernetes, and Shell scripting.
- Diagnosed production issues, optimized service performance, and improved operational stability.

Key Highlights

- ✅ Enterprise Reporting Platform
- ✅ Backend Architecture
- ✅ Database Migration
- ✅ Security Compliance
- ✅ Containerized Deployment
- ✅ API Documentation
- ✅ Production Optimization

Configurator Tool

Played a key role in developing the **Configurator Tool**, a JSON-driven configuration platform that enables rapid creation and customization of enterprise dashboards without requiring application code changes. Contributed to platform architecture, reusable UI components, backend services, and customer enablement.

Key Contributions

- Contributed to the architectural design of a configurable, JSON-driven dashboard platform.
- Developed reusable frontend components and backend modules to support scalable platform capabilities.
- Designed flexible configuration models that enabled dynamic dashboard creation and customization.
- Collaborated with cross-functional teams to deliver extensible, maintainable, and user-centric platform features.
- Worked directly with enterprise customers to implement complex JSON configurations tailored to business requirements.
- Served as the primary technical resource for the platform, troubleshooting production issues and providing technical guidance.
- Conducted Knowledge Transfer (KT) sessions and mentored new engineers on platform architecture, configuration, and best practices.
- Continuously enhanced platform stability, maintainability, and customer experience through ongoing improvements.

Key Highlights

- ✅ JSON-Driven Platform
- ✅ Enterprise Dashboard Configuration
- ✅ Platform Architecture
- ✅ Customer-facing Engineering
- ✅ Technical Ownership
- ✅ Knowledge Transfer & Mentoring
- ✅ Enterprise Support

Architecture Modernization Initiative

Contributed to the organization's platform modernization initiative by designing and implementing migration utilities to transition enterprise services from MongoDB to relational databases. Collaborated with architects to modernize backend services while ensuring data consistency, system reliability, and minimal downtime.

Key Contributions

- Designed and developed migration utilities to migrate enterprise data from MongoDB to relational databases.
- Worked closely with architects to define migration strategies and database transformation logic.
- Ensured data integrity through validation, reconciliation, and error handling mechanisms.
- Optimized migration performance for large enterprise datasets.
- Collaborated with multiple product teams to ensure seamless migration with minimal business disruption.
- Supported production deployment and post-migration validation activities.

Key Highlights

- ✅ Enterprise Platform Modernization
- ✅ MongoDB → SQL Migration
- ✅ Data Integrity
- ✅ High-volume Data Processing
- ✅ Cross-team Collaboration

Platform Engineering & On-Prem DevOps

Contributed to the deployment, automation, and operational management of enterprise applications running on on-premises infrastructure. Worked closely with engineering teams to containerize services, streamline deployments, and improve operational reliability.

Key Contributions

- Containerized enterprise applications using Docker.
- Managed deployments on Kubernetes-based on-premises infrastructure.
- Developed Shell scripts to automate deployment and operational activities.
- Collaborated with infrastructure teams to troubleshoot production environments.
- Supported release management and deployment planning.
- Improved deployment consistency and operational efficiency.

Key Highlights

- ✅ Docker
- ✅ Kubernetes
- ✅ Linux
- ✅ Shell Scripting
- ✅ CI/CD Support
- ✅ On-Prem Infrastructure

Application Security Modernization

Worked closely with the Cyber Security team to strengthen the security posture of multiple enterprise applications by identifying, prioritizing, and remediating

application vulnerabilities discovered through VAPT assessments and Snyk scans.

Key Contributions

- Resolved application vulnerabilities identified during VAPT assessments.
- Remediated dependency vulnerabilities reported by Snyk.
- Collaborated with security teams to implement secure coding practices.
- Improved application compliance with organizational security standards.
- Supported security validation during release cycles.

Key Highlights

- ✅ VAPT Remediation
- ✅ Snyk
- ✅ Secure Coding
- ✅ Dependency Management
- ✅ Security Compliance

Enterprise Services

Currently serve as a technical subject matter expert for multiple enterprise services, partnering directly with customers to deliver configurations, resolve production issues, and enable successful platform adoption.

Key Contributions

- Own technical support for the Notification Server, JSReport Server, and Configurator Tool.
- Work directly with enterprise customers to implement complex JSON-based configurations.
- Troubleshoot production issues and perform root-cause analysis.
- Conduct Knowledge Transfer (KT) sessions for new engineers.
- Collaborate with product and engineering teams to continuously improve customer experience.
- Drive service reliability through proactive issue resolution and platform enhancements.

Key Highlights

- ✅ Technical Ownership
- ✅ Customer-facing Engineering
- ✅ Production Support
- ✅ JSON Configuration
- ✅ Knowledge Transfer
- ✅ Technical Mentoring

J2 Global

Contributed as a Lead UI Developer in the development and enhancement of enterprise-grade web applications for J2 Global. Owned the implementation of scalable frontend features while collaborating with cross-functional teams to deliver high-quality, maintainable software that supported critical business operations.

Key Contributions

- Led end-to-end feature development using **React.js**, and **Redux**.

- Designed and implemented scalable frontend modules aligned with business requirements.
- Developed reusable React components, improving maintainability and accelerating feature delivery.
- Collaborated closely with product owners, QA engineers, and developers throughout the complete software development lifecycle.
- Participated in architecture discussions, code reviews, debugging, and production support.
- Optimized application performance through efficient component design and state management.

Key Highlights

- ✅ Full Stack Development
- ✅ Enterprise Web Applications
- ✅ REST API Integration
- ✅ Reusable Component Architecture
- ✅ Performance Optimization
- ✅ Agile Development
- ✅ Cross-functional Collaboration

Catalyst Console

Served as the Lead Frontend Developer for Catalyst Console, an enterprise administration platform focused on delivering scalable, reusable, and high-performance user interfaces. Played a key role in improving application quality through component-driven development, comprehensive unit testing, and frontend architecture best practices.

Key Contributions

- Led frontend development using **React.js** and **Redux**, delivering scalable and responsive enterprise interfaces.
- Designed and developed reusable UI components, improving consistency and reducing development effort.
- Implemented centralized state management using Redux for predictable application behavior.
- Developed comprehensive unit tests using **Jest** and **Enzyme**, improving application reliability and reducing regression defects.
- Built reusable UI components using **Storybook**, enabling faster development and consistent design implementation.
- Worked closely with backend developers, QA teams, and product owners to deliver high-quality software.
- Participated in code reviews and established frontend best practices to improve maintainability.

Key Highlights

- ✅ Frontend Technical Leadership
- ✅ Component-Driven Development
- ✅ Unit Testing (Jest & Enzyme)
- ✅ Storybook Design System
- ✅ Redux Architecture

- ✅ Responsive UI Development
- ✅ Enterprise Application Development

Genes2Teens

Worked as a Lead Full Stack Developer in building a healthcare and wellness platform focused on delivering a seamless digital experience for users. Contributed across the complete application stack, delivering scalable frontend interfaces, backend services, and robust API integrations while collaborating closely with business stakeholders.

Key Contributions

- Led end-to-end feature development using **Node.js**, **React.js**, and **Redux**.
- Designed and developed responsive user interfaces focused on usability and accessibility.
- Built backend services and integrated RESTful APIs to support business workflows.
- Developed reusable frontend components, improving maintainability and accelerating future development.
- Collaborated with stakeholders to translate functional requirements into scalable technical solutions.
- Optimized application performance through efficient rendering, API integration, and state management.
- Participated throughout the software development lifecycle, including requirement analysis, development, testing, deployment, and production support.

Key Highlights

- ✅ Full Stack Development
- ✅ REST API Development & Integration
- ✅ Reusable Component Architecture
- ✅ Performance Optimization
- ✅ Responsive User Experience
- ✅ Agile Collaboration
- ✅ End-to-End Feature Ownership

FirstHandle – Marketing Automation Platform

Contributed to the development of **FirstHandle**, a marketing automation platform, by building a scalable and responsive frontend using **React** and **Redux**. Played a key role in developing reusable UI components, integrating backend services, and delivering a seamless user experience for marketing campaign management.

Key Contributions

- Built the frontend application from the ground up using **React** and **Redux**, establishing a scalable, component-driven architecture for future feature development.
- Developed reusable and maintainable UI components, improving code consistency, reducing duplication, and accelerating development.
- Designed and implemented responsive, user-friendly interfaces that provided a consistent experience across multiple screen sizes and devices.
- Collaborated closely with backend engineers to integrate **RESTful APIs**, ensuring smooth communication between frontend and backend services.

- Implemented centralized state management using **Redux**, enabling predictable application state, improved maintainability, and easier debugging.
- Optimized application performance by minimizing unnecessary component re-renders, improving state updates, and enhancing overall responsiveness.
- Participated in feature planning, requirement discussions, implementation, debugging, and production issue resolution throughout the development lifecycle.
- Followed modern frontend development best practices, including modular code organization, reusable component design, and clean coding standards.

Key Highlights

- ✅ Frontend Development from Scratch
- ✅ React & Redux Architecture
- ✅ Responsive UI Development
- ✅ Reusable Component Design
- ✅ REST API Integration
- ✅ Performance Optimization
- ✅ Cross-Team Collaboration
- ✅ Scalable Frontend Architecture

Technologies

React.js • Redux • JavaScript • HTML5 • CSS3 • REST APIs • Responsive Design • Component-Based Architecture • Git

WeeGreen Campaign

Developed campaign management features for **WeeGreen Campaign**, enabling businesses to create and manage digital marketing campaigns efficiently.

- Built interactive and responsive user interfaces using **Angular 4**.
- Developed reusable components and optimized application performance for a smooth user experience.
- Implemented a **custom theme engine** using **Stylus** and **Jade**, allowing multiple clients to have their own branded experience without changing application logic.
- Worked closely with backend developers to integrate APIs and ensure seamless campaign management workflows.
- Participated in feature enhancements, bug fixes, and continuous product improvements.

Frontend Modernization & Code Quality Initiative

Initiated and drove frontend code quality improvements across multiple modules to increase maintainability and developer productivity.

- Led several code refactoring initiatives by introducing reusable components and modular JavaScript architecture.
- Applied JavaScript best practices and established design patterns to reduce code duplication and improve readability.
- Standardized frontend implementation across multiple modules, making future feature development faster and easier.
- Optimized application performance by identifying bottlenecks and simplifying complex UI logic.

- Collaborated with team members to promote maintainable coding standards across the project.

Adoddle

Contributed to the development of **Adoddle**, an enterprise construction collaboration and document management platform used by organizations to manage project documents, workflows, and team collaboration. Owned the end-to-end development of the File Upload Module and delivered several enterprise features that streamlined document management and improved productivity for end users.

Key Contributions

- Owned the end-to-end development and enhancement of the **File Upload Module**, delivering scalable and reliable document upload capabilities.
- Developed **Bulk File Upload** functionality, enabling users to upload multiple documents simultaneously and significantly improving operational efficiency.
- Implemented **Bulk Upload with Custom Attributes**, allowing users to associate project-specific metadata with uploaded documents during upload.
- Built **Chunk File Upload** functionality to support reliable uploads of large files over unstable network connections.
- Developed **Copy Folder Structure**, **Copy/Paste Folder**, and **Copy Project Structure** features, simplifying project setup and reducing repetitive manual effort.
- Implemented **client-specific themes** using **Stylus**, enabling customized branding while maintaining a single, reusable codebase.
- Optimized frontend workflows using **jQuery** and **JavaScript**, ensuring responsive user interactions and seamless integration with backend services.
- Collaborated closely with backend developers, QA engineers, and product stakeholders throughout the complete software development lifecycle.

Key Highlights

- ✅ Owned the Complete File Upload Module
- ✅ Bulk & Chunk File Upload
- ✅ Enterprise Document Management
- ✅ Folder & Project Structure Automation
- ✅ Multi-client Theme Customization
- ✅ Performance Optimization
- ✅ Cross-functional Collaboration

Adoddle Workflows

Contributed to the development of **Adoddle Workflows**, an enterprise workflow automation platform that enabled organizations to design, manage, and execute configurable business processes. Developed user-centric workflow management features, enhanced application usability, and collaborated with cross-functional teams to deliver scalable solutions for enterprise customers.

Key Contributions

- Developed and enhanced frontend features using **jQuery**, **JavaScript**, **HTML5**, and **CSS3** for an enterprise workflow management platform.
- Built dynamic and interactive user interfaces to simplify workflow configuration and execution.

- Implemented configurable business workflows, enabling organizations to automate approval processes and operational tasks.
- Developed reusable UI components and JavaScript modules to improve maintainability and reduce development effort.
- Integrated frontend components with backend REST APIs, ensuring seamless data exchange and responsive user interactions.
- Optimized application performance by improving client-side rendering, event handling, and asynchronous operations.
- Collaborated closely with backend developers, QA engineers, and product owners to deliver reliable, high-quality features.
- Participated in requirement analysis, feature implementation, debugging, production support, and continuous application enhancements.

Key Highlights

- ✅ Enterprise Workflow Automation
- ✅ Dynamic UI Development
- ✅ Business Process Configuration
- ✅ REST API Integration
- ✅ Reusable JavaScript Components
- ✅ Performance Optimization
- ✅ Cross-functional Agile Collaboration

My Protfolio

Portfolio Builder Platform (Personal SaaS)

Designed and developed a **full-stack SaaS platform** that enables professionals to create, manage, and publish their own portfolio websites without writing any code. The platform provides a centralized dashboard for managing profile information while automatically generating a responsive, production-ready portfolio website with real-time updates.

Key Contributions

- **Independently architected, designed, and developed the entire application**, taking complete ownership from product ideation through development, deployment, and continuous enhancement.
- Designed a **scalable system architecture**, including database schema, REST API design, application workflows, and modular project structure to ensure maintainability and future extensibility.
- Built a **modern, reusable, component-based frontend** using React, delivering a responsive, intuitive, and user-friendly experience across desktop and mobile devices.
- Developed a comprehensive **dashboard** enabling users to perform complete CRUD operations for:
  - Personal Information
  - Professional Experience
  - Projects
  - Technical Skills
  - Education
  - Contact Information

    - Social Profiles
- Implemented a **real-time content management workflow**, ensuring every update made through the dashboard is instantly reflected on the user's public portfolio without requiring manual website updates.
- Engineered a modular backend using **Python (FastAPI)**, following clean architecture principles with well-structured REST APIs and clear separation of concerns.
- Designed and optimized **MongoDB document models and collections** to support efficient querying, flexible data relationships, and long-term scalability.
- Implemented comprehensive **server-side validation, exception handling, and standardized API responses** to maintain data integrity and provide a reliable user experience.
- Followed **component-driven development** and reusable coding practices across both frontend and backend, resulting in a scalable and maintainable codebase.
- Managed the complete deployment pipeline by hosting the frontend on **Vercel** and integrating it seamlessly with backend APIs and services.
- Owned the **entire software development lifecycle (SDLC)**, including:
    - Requirement gathering
    - Feature planning
    - System architecture
    - UI/UX implementation
    - Frontend development
    - Backend development
    - Database design
    - Testing
    - Deployment
    - Continuous enhancements

Key Highlights

- ✅ Full-Stack SaaS Application
- ✅ Complete Product Ownership
- ✅ Responsive & Mobile-First Design
- ✅ Real-Time Portfolio Updates
- ✅ Modular & Scalable Architecture
- ✅ Reusable Component-Based Development
- ✅ RESTful API Development
- ✅ Production Deployment

Technologies

React.js • JavaScript • FastAPI • Python • MongoDB • REST APIs • HTML5 • CSS3 • Responsive Design • Component-Based Architecture • Vercel • Git
